1 Do you have any evidence the site has been used for "phishing activities."

2 How did you become aware of the existence of the site?

3. Did you review the content of the site before you blocked it?

Also when I purchased the domain I was not required to agree to the conditions on your site – why not?

Await your advice

Regards

Warren Bolton

Hi Warren,

Domain name ozfacebook.site is suspended based on a proactive analysis where the domain is found to be similar to the brand Facebook, Inc. Such domains have shown a high tendency to be used for phishing activities.

Moreover, registering domains similar to trademark associated brands is a violation of our Acceptable Usage Policy listed at <https://radix.website/policies-docs/Radix-AcceptableUsePolicy.pdf>. As such a suspension action was conducted in this case.

Please feel free to revert, should you have any further concerns about this matter.

Regards,
Abuse Mitigation Team
RADIX

You received an Unsuspension Request from Radix Website:

Name: Warren Bolton

Email: me@warrenbolton.com

Domain: ozfacebook.site

Source: Proactive Analysis

Reason: Malware/Phishing

Message: At about 630 tonight I went to open the above website and received the message on the

browser that it could not reach the server I then rang up Go Daddy to investigate as to the situation with my website which went live about last Friday after a considerable investigation I was told you had terminated use of the domain I had purchased from you through Go daddy They sent me to your site and gave me your email address On your site I was informed that The domain ozfacebook.site is currently suspended, The domain was suspended based on or proactive analysis where similar pattern domains were reported and suspended for abuse. And that To get the domain name unsuspended, please update the reason for registering this name and/or the purpose it will be used for. I was also advised ServerHold is a status applied on a domain name by the Registry Operator. Your domain is not included in the zone file and will not resolve. It is an uncommon status that is usually enacted during legal disputes or when your domain is subject to abuse cases. Except for the vague reason offered above I wish to know under what process and basis did you determine that my website constituted "the subject of an abuse case" or the subject of a "legal dispute" which required you to take the action you did? The website is a simple one page of text with no interactivity between any visitor and anybody else it contains no other code but HTML. It constitutes entirely "public comment" on the current international dispute between the Australian government and Facebook I consider your reaction a serious violation of the contractual obligation between myself and your organisation for the delivery of the services for which I have paid. In the absence of a satisfactory explanation for your actions and the instant release of the Server Hold I will take action to address this commercial abuse by the unjustified 'obstruction of performance' of what I see is my commercial rights to use the product lawfully for the purposes it was purchased and provided.
